

ADEMOLA OMOSANYA

0813 501 4103 | omosanyaademola@gmail.com | [GitHub](#)

Summary

Mid-level software engineer with strong open-source background and mentorship experience. Led the rewrite of Wikimedia's PendingChangesBot from PHP to Python, improving performance and maintainability, and contributed enhancements to MediaWiki's VisualData json-schema. Delivered UI improvements for the OCaml project website by reorganizing footer links for better navigation.

EXPERIENCE

Wikimedia Foundation

Software Engineer(Mentor)

San Francisco, California, United States · Oct 2025 - Present

- Mentored Outreachy interns to rewrite the PendingChangesBot from PHP to Python, using Docker containers on Linux and macOS for consistent development environments and applying Python best-practice patterns, resulting in a functional Python version ready for deployment
- Provided technical guidance on migrating legacy PHP codebases to Python with improved structure, maintainability, and performance.
- Supported interns in understanding Wikimedia's open-source development workflows-including GitHub pull-request reviews, documentation standards, and collaboration tools such as Phabricator-enabling them to submit their first code contributions successfully
- Guided best practices in Python development, software design, and testing in a real-world production environment.
- Facilitated intern engagement with the Wikimedia developer community while contributing to tools that support content moderation and quality control across Wikimedia projects.
- Implemented intern training on Linux-based workflows including Docker orchestration and environment setup for seamless local development

Outreachy Intern/contributor

Remote · Mar 2025 - Oct 2025

- Contributed to the Wikimedia Foundation through the MediaWiki project, focusing on enhancing VisualData's JSON schema in MediaWiki
- Implemented features and resolved issues by collaborating with open-source contributors, mentors, and project maintainers.
- Gained hands-on experience with JSON, PHP, JavaScript, MediaWiki, Git/GitHub, and APIs on Linux and Unix-like environments
- Produced clean, documented code and actively participated in code reviews, project discussions, and community meetings.
- Improved my skills in remote collaboration, open-source contribution, and agile development practices.

OCaml

open source contributor

remote · Oct 2023 - Dec 2023

- Collaborated with the OCaml development team as Outreachy applicant.
- Completed a selected task to rearrange the footer links in the footer template (footer.eml) of the OCaml project's website, improving navigation and user experience.
- Successfully reorganized footer links according to specified guidelines, ensuring seamless integration with the existing website design.
- Actively participated in team discussions, adhered to project standards, and contributed to continuous improvement efforts.

SKILLS

- **Programming Languages:** Javascript, Python, MySQL, HTML/CSS, PHP, Typescript
- **Libraries/Frameworks:** React, Next.js, Node.js, Bootstrap, Express.js, TailwindCSS, Vue
- **Databases:** MySQL, MongoDB
- **Tools / Platforms:** Git/GitHub, Visual Studio Code (VS Code), Docker, Postman, Linux, MacOS, Unix-like Environments
- **Cloud & DevOps:** AWS, Distributed Systems, DevOps, CI/CD, Infrastructure As Code

Education

Miva open University

May 2026 - Dec 2028

Bsc. Software Engineering

Nigeria

- **GPA:** 4.0

Federal University of Technology Akure

Sep 2021 - Nov 2025

B.Tech Meteorology and Climate Science

Nigeria

- **GPA:** 3.54

PROJECTS / OPEN-SOURCE

Footer Template Restructuring [Link](#)

OCaml

- Reorganized footer.eml links to improve navigation and user experience across the OCaml website using HTML/CSS in a Unix-like environment.
- Rearranged footer links according to specified guidelines, enhancing the website's usability.

- Collaborated with the OCaml development team and adhered to project standards and guidelines.
- Ensured seamless integration of the updated footer template with the existing website design.
- Actively participated in discussions and contributed to the project's continuous improvement efforts.

VisualData JSON-Schema Improvements [Link](#)

MediaWiki

- Implemented JSON-Schema support in MediaWiki's VisualData extension using JavaScript and PHP to enhance structured data handling across Wikimedia projects.
- Collaborated with maintainers via Git/GitHub to build an editor for CRUD operations on pages, schemas, and slots, streamlining import workflows.
- Continued as a volunteer after internship, maintaining and enhancing the extension by writing code, reviewing feedback, and raising PRs.

Cat-a-lot Gadget [Link](#)

Wikimedia Commons

- Javascript, MediaWiki Gadgets
- Improved the Cat-a-lot JavaScript gadget, a widely used tool on Wikimedia Commons for bulk photo categorization.
- Investigated and fixed a bug in the Cat-a-lot gadget where selecting a protected file caused the in-progress dialog to hang indefinitely.
- Enhanced error handling by adding callbacks, creating user-friendly dialogs (Ignore & continue / Stop editing), and improving feedback to users.
- Improved UI experience with better CSS, dark mode support, and modularized code to separate error display logic.
- Ensured the fix was reviewed and merged into the production version.
